

Warning:

Termite Swarm Season is Here!

As we are at the beginning of termite swarm season here in central Florida, it is important to be aware of what to look for. Below is an illustration of the difference between a swarmer termite and an ant swarmer. Note the slender waist on the ant and the 2 pair of wings that are different sizes.

Generally, the first place you will find termite swarmers is near a window sill as they are attracted to light. Second, you may see small pin size holes in the wall or wood. These are exit holes, and they are where the swarmers come out of. If you see, or suspect you have termites, please give us a call at 352-394-7215 or email us at greg@advancetechpest.com. We will be glad to come out, identify, and assess any problems you may have. It is important to get a termite problem taken care of to stop the damage as soon as possible.
